2)   XSLT connector: TemplateFile setting is no longer recognized. J-COM made heavy use of the XSLT connector and asked to be able to share the template path for XSLT connectors so they could maintain changes across multiple connectors in one place. The templatefile configuration setting was preserved from ArcESB 2020 to ArcESB 2021, but the setting is no longer recognized as a valid configuration setting. Changes in the configuration setting of ArcESB are no longer being recognised due to heavy use of XSLT connector. Path of configuration setting should not be disclosed. CData ArcESB CData Connect

3)   Migrate ShipStation connector. We are planning to release this connector with the new interface, we might as well go ahead and replace the existing ShipStation Connector. We need to be a bit more careful for our existing connectors, but for the new ones I think we should make it so the dev branch looks like what we intend to merge. Migration should be made in a way that the existing connector should not get affected. ShipStation connector should be migrated to new user interface. CData Drivers CData ArcESB CData Connect

4)   Fix Offline_InsertSalesOrder_Test() in .NET Offline_InsertSalesOrder_Test NetSuiteConnectorTest.cs line 3693 Duration: 251 ms Message: ArcESB Version: 0.0.0.0 System Version: 0 VM Version: 0 Provider: System.Data.CData.NetSuite 21.0.8091.0 error: Types from the assembly NUnit.VisualStudio.TestAdapter, Version=2.3.0.0, Culture=neutral, PublicKeyToken=4cb40d35494691ac could not be discovered. Could not load file or assembly 'Microsoft.VisualStudio.TestPlatform.ObjectModel, Version=11.0.0.0, Culture=neutral, PublicKeyToken=b03f5f7f11d50a3a' or one of its dependencies. The system cannot find the file specified. The offline version of .net connector is not working. Error is encountered when the file Offline_InsertSalesOrder_Test is accessed because of issues in .net connector of data and arcesb CData ArcESB CData Connect

5)   Improve .svgs on the Client page Design Problem The size of the logos are not uniform when it comes to the constrained proportions of the bounding box. Design Solution: https://www.figma.com/file/Ee9bI2QhQDu2MX3utfK9Dw/CLOUD-500%3A-Improve-.svgs-on-Client-page?node-id=0%3A1 New .svg files can be found here. Place all icons to fit within the same canvas size dimensions to ensure max-width/max-height makes sense based on the constrained proportions of each logo Dev Problem: When on the page for the first time, the svgs take long to load, leaving about a half-second to second of blank icons making the page format look off. Dev Solution Look at options at how to best solve this. We want to continue to use SVGâ€™s but we can possibly combine them so that they get cached together and load quickly with the page. The offline version of .net connector is not working. Error is encountered when the file Offline_InsertSalesOrder_Test is accessed because of issues in .net connector of data and arcesb CData Server CData Connect

6)   Multi User functionality mail invite issue When we attempt to add a new user to the connect. The email address is saved as case-sensitive. So, if the user enters the email address is not in the same case as the invite when logging in with the same email address. It returns an error message stating that "the email address "XYZ@cdata.com" does not match the invited email address." The email address should not be case sensitive. The code should be implemented in a way that the email address is turned to lower case to avoid mismatch of case. CData Connect

7)   TDS Qlik Sense Cloud Column Type_Name issue I am able to successfully load the database information but later on, while trying to preview the tables we get an error. Column 'TYPE_NAME' does

not belong to table Columns. The error is caused by returned resultset of native stored procedure for cloud. We need to compare our cloud implementation with official one to find the difference. CData DBAmp

8) Pipedrive:- Functional Queries are not working properly. For "ActivityTypes" table when we are updating the column "KeyString" we are getting message as successfully updated but when trying to fetch the record that column is not updated. Query:- update ActivityTypes set keyString = 'Rahul' where Id = 8; Output:- "KeyString" column is not getting updated. 2)On inserting data in column "keyString", while running insert it is showing success 1 i.e. data is getting inserted but when I am doing select * from ActivityTypes value of keyString column is not getting insert instead it is picking up the value "Name" column is having. 3)Query:- INSERT INTO CallLogs (Outcome,StartTime,EndTime,Duration,FromPhoneNumber,ToPhoneNumber,UserId,OrgId) values('connected','2022-03-09','2022-03-10','1010','9999911111','8888822222','8230170','8'); Output:- Success but "Duration" column is marked as readonly=false but data is not getting inserted. 4)"IN" operator is not working for "Activities" Table Query:-SELECT type FROM Activities WHERE Type IN ('deadline','call'); Output:- Getting null column also along with "deadline" and "call" value. Query:- SELECT type FROM Activities WHERE Type not IN ('deadline','call'); Output:- WHen trying with "not in" operator we are not getting columns which are null. 5)Query:- select * from DealFields where Name = 'Vivek'; Output:- Along with 'Vivek' other data are also getting fetched. Database column is getting updated but changes are not reflected while fetching data from database. The sql queries to update ,select and insert should be done with the use of primary key to reflect changes ion the database. CData DBAmp CData Server

9) Zoho Books - Organization ID ignored when "Include Custom Fields" = True. Tested in SSIS. When the customer set "Include Custom Fields" = False, they were able to query all their tables. However, setting the property to True resulted in a Resource Error. Nothing else was changed in the connection properties, and an Organization ID was set. The error is pasted below: [HTTP|Res: 16] {"code":6024,"message":"This user belongs to multiple organizations, hence the parameter CompanyID/CompanyName is required for associating this user to a specific organization.","error_info":[{"organization_id":"20064251968","name":"Tesylate","is_default_org":true }, {"organization_id":"20065171222","name":"Tesylate 3D","is_default_org":false}]} and [META|Schema] Executed column schema query: [Items] Error: The resource was not found. Adding the organization id in the url while fetching the custom columns will resolve the issue. The attribute should be set to true. CData Drivers CData Server
